

AVEM

Long range surveying drone

AVEM

24,3

MEGAPIXELS

BLOS

LONG-RANGE

2hr

FLIGHT TIME

400

HA/HOUR

The **resolution** of the embedded imaging sensor, operating in the visible or near infrared spectrum.

The **AVEM is approved** for Beyond-Line-Of-Sight flights and covers very large areas.

This **best in-class flight time** available on the AVEM allows to efficiently cover hundreds of hectares.

The **AVEM hourly productivity** at 150 meters and with a GSD of 3 centimeters.

Sensor Specifications

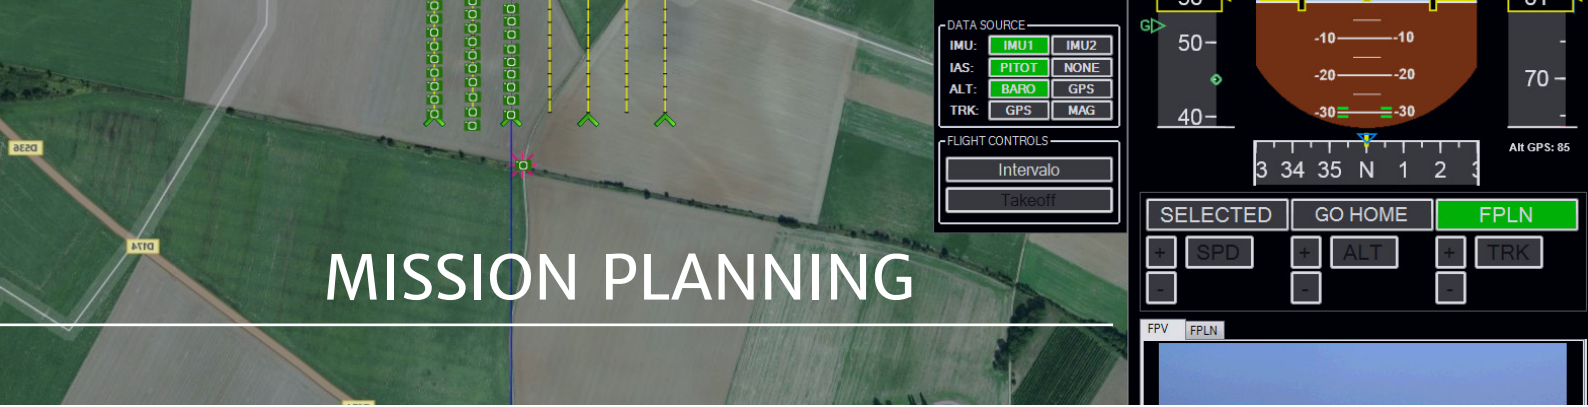

Standard sensor	SONY a5100	Definition	24.3 MPx
Spectrum	R-V-B / PIR-V-B	Resolution	From 0.8 cm / Pixel
Focal length	19 mm or 30 mm	Accuracy after post-treatment	x, y, z : +/- 4 cm

Imaging characteristics

Focal length / Flight altitude	Picture size	Ground resolution
30 mm / 80 m	62 m x 42 m	1.0 cm
30 mm / 150 m	118 m x 79 m	2.0 cm
19 mm / 80 m	99 m x 66 m	1.6 cm
19 mm / 150 m	186 m x 124 m	3.0 cm

Use your own sensors

To cover your specific needs, Aeromapper can easily integrate your own sensors weighing up to **500g**

Forget mathematics
Aeroplanner plans your missions in a few clicks and integrates your specifications in a simple and intuitive way.

A few minutes are enough
to integrate all the mission and field parameters, and efficiently prepare your flight plans.

Aeroplanner integrates all the tools needed to complete your mission and comply with all the requirements of your customer.

GROUND STATION AND FLIGHT MONITORING

With a carry case, you can safely and easily move your ground station around the world.

Running on rechargeable batteries, the ground station is designed to be very easy to use.

The control interface has been developed following aeronautical codes and guarantees absolute safety.

After a short training, the pilot will be comfortable with the interface, ready to operate the AVEM in all conditions.

TECHNICAL SPECIFICATIONS

<i>Approvals</i>	<i>BLOS Certified</i>	<i>Wind resistance</i>	<i>40 km/h</i>
<i>Autonomy</i>	<i>2h</i>	<i>Radio range</i>	<i>15 km</i>
<i>Wingspan</i>	<i>2.13 m</i>	<i>Maximum altitude</i>	<i>3000 m</i>
<i>Maximum weight</i>	<i>2000 g</i>	<i>Installation Time</i>	<i>< 10 mn</i>
<i>Payload</i>	<i>500 g</i>	<i>On-axis precision</i>	<i>+/- 2 m and +/- 2°</i>
<i>Take-off</i>	<i>Launched by hand</i>	<i>Distance travelled</i>	<i>120 km/flight</i>
<i>Guidance</i>	<i>Automatic</i>	<i>Covered area 150 m</i>	<i>400 ha/hr</i>
<i>Cruising speed</i>	<i>60 km/h</i>	<i>landing surface</i>	<i>Min 5x20 m</i>

TRAINING & SUPPORT

BY YOUR SIDE

A true partner

Aeromapper is by your side to support, advise and assist in your operations. Our team has extensive experience in the field.

Autonomy in operations

Aeromapper emphasizes on high quality training, key factor for mission success.

TRAINING

Around the world

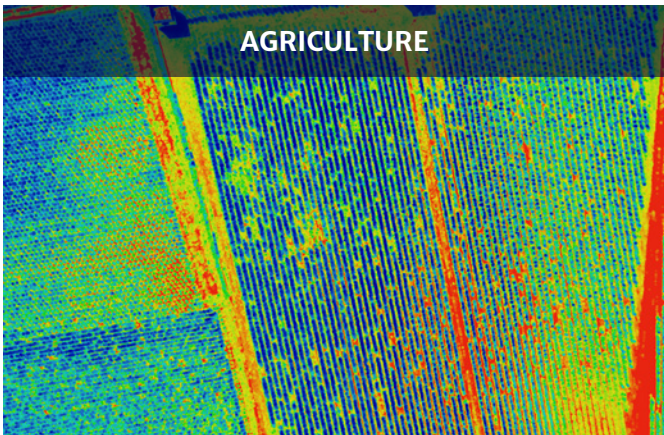

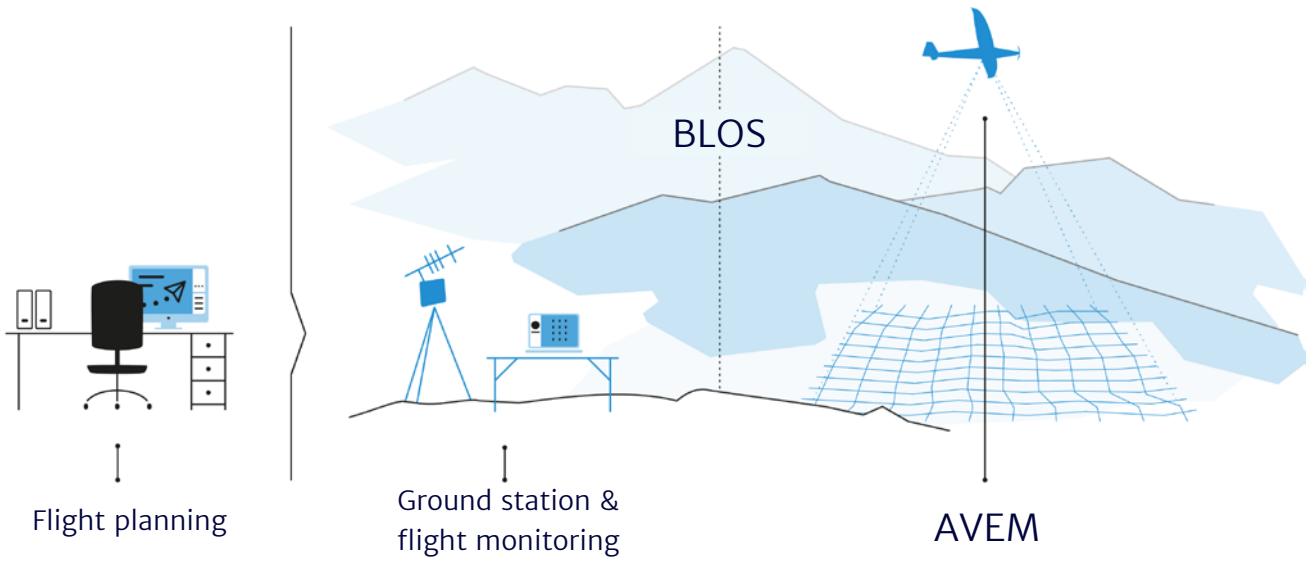

Contact us wherever you are. We will be happy to offer support and assist you in making every operation a success.

SUPPORT

APPLICATIONS

COMBINING OUTSTANDING PERFORMANCE AND DATA QUALITY

Having the best sensor alone is not enough to provide good quality imagery. Aeromapper has also developed numerous technologies to offer its UAV exceptional flight behavior. The AVEM will impress its user with precision of acquired data and with flight performance.

MAINTAINING AN OPERATIONAL PERSPECTIVE

Aeromapper's main concern is streamlining operations. On this basis, we are always listening to our customer's experience and feedback to always keep improving the system.

SECURITY

Considering flight safety as its top priority, Aeromapper has invested heavily in the design of many systems to make operations as safe as possible.
